DETAILED ACTION

1. The Office Action is responsive to the communication filed on 01/18/2011.
2. Claims 1-2, 5, 8-13, 16-26, 29-30, 32, 34-39, 41-42, 44-51 are allowed.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance: The prior art, alone or in combination, does not teach the following limitations:

50. (New) A method for selecting a network and interface combination, to which a computing system will initiate a connection via the network interface, based upon network information spanning multiple communication media, the method comprising:

maintaining network selection criteria in a rules data store; with at least one processor: accumulating network interface information spanning multiple communication media, the accumulated network interface information being associated with a set of networks and a set of network interfaces, each network interface for connecting the computing system to a network in the set of networks;

at a rules engine, designating one of the set of networks by applying a network selection criterion from the network selection criteria in the rules data store to the accumulated network interface information;

at a plurality of media specific modules, acquiring network interface information pertaining to network interfaces associated with particular media types, the network interface information acquired from media specific drivers associated with particular interfaces;

at the plurality of media specific modules, receiving network interface configuration commands from the rules engine to connect to one of the set of networks;

at a media specific module interface comprising a normalization module, converting standardized communication requests into media specific communications that meet media specific implementation requirements; and

at the media specific module interface, directing the media specific communications to respective network interfaces.

(Previously presented) A computing system supporting network selection based upon network information spanning multiple communication media, the system comprising:

- a rules data store for maintaining network selection criteria; a media specific module interface for providing accumulated network interface information spanning multiple communication media, the accumulated network interface information being associated with a set of networks and a set of network interfaces, each network interface for connecting the computing system to a network in the set of networks;
- a rules engine, comprising at least one processor, for designating one of the set of networks by applying a network selection criterion from the rules data store to the accumulated network interface information spanning multiple media; and
- a plurality of media specific modules configured to acquire network interface information pertaining to network interfaces associated with particular media types, and to receive network interface configuration commands, from the rules engine, to connect to one of the set of networks, each of the media specific modules configured to acquire network interface information from media specific drivers associated with particular interfaces,

wherein the media specific module interface comprises a normalization module that converts standardized communication requests it receives from the rules engine into media specific communications that meet media specific implementation requirements, the normalization module further configured to direct the media specific communications to respective network interfaces.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Johnson, Reg # 39525 on 03/25/2011.

51. (Currently Amended) A computer storage medium ~~computer-readable medium~~ including computer-executable instructions for facilitating selecting a network and interface combination, to which a computing system will initiate a connection via the network interface, based upon network information spanning multiple communication media, the computer-executable instructions facilitating: maintaining network selection criteria in a rules data store; at a plurality of media specific modules, acquiring network interface information pertaining to network interfaces associated with a set of networks and a plurality of media types, the network interface information acquired from media specific drivers associated with particular interfaces, each network interface for connecting the computing system to a network in the set of networks; at a rules engine, designating one of the set of networks by applying the network selection criteria from the rules data store to the accumulated network interface information; sending standardized communication requests from the rules engine to a media specific module interface comprising a normalization module, the standardized communication requests related to the designation of the one of the set of networks; at the normalization module, converting standardized communication requests into media specific communications that meet media specific implementation requirements; and

at the media specific module interface, directing the media specific communications to respective media specific modules.
